

Amendments to the Claims:

Please cancel claims 2, 3, 5-7, 10, 11, 13-19, 21 and 22, and amend claims 4, 8, 9, 12 and 20 as follows. The following listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

Claims 1-3 (Cancelled).

Claim 4 (Currently Amended). ~~The~~ A textile printing apparatus ~~of claim 3,~~ comprising:

inputting means for inputting image data;

a display to indicate an image based on the image data input

5 by the inputting means;

image processing means for applying image processing to the image data so as to make colors of the image indicated on the display close to desired colors;

10 a printer to print the image on a fabric based on the image data applied with the image processing by the image processing means; and

a memory to store a first color converting table to apply the first color converting processing and information to apply the converting processing;

15 wherein the image processing means applies a first color converting processing to the image data input by the inputting means in accordance with a kind of fabric and indicates the image on the display based on the image data applied with the color converting processing,

20 wherein the image processing means applies a converting processing to the image data applied with the image processing by the image processing means in accordance with the kind of fabric,

wherein the image processing means applies the first color converting processing based on the first color converting table
25 stored in the memory and applies the converting processing based on the information stored in the memory,

 wherein the information includes a least one of an ejecting amount of an ink, a mixing ratio of different color inks and information regarding a density level of an ink, corresponding to
30 the kind of ~~the~~ fabric, and

wherein the printer prints the image on the fabric based on the image data applied with the converting processing.

Claims 5-7 (Cancelled).

Claim 8 (Currently Amended). ~~The~~ A textile printing
apparatus ~~of claim 3,~~ comprising:

inputting means for inputting image data;

a display to indicate an image based on the image data input

5 by the inputting means;

image processing means for applying image processing to the
image data so as to make colors of the image indicated on the
display close to desired colors;

10 a printer to print the image on a fabric based on the image
data applied with the image processing by the image processing
means; and

a memory to store a first color converting table to apply
the first color converting processing and information to apply
the converting processing,

15 wherein the image processing means applies a first color
converting processing to the image data input by the inputting
means in accordance with a kind of fabric and indicates the image
on the display based on the image data applied with the color
converting processing,

20 wherein the image processing means applies a converting
processing to the image data applied with the image processing by
the image processing means in accordance with the kind of fabric,
wherein the image processing means applies the first color
converting processing based on the first color converting table
25 stored in the memory and applies the converting processing based
on the information stored in the memory,
wherein the printer prints the image on the fabric based on
the image data applied with the converting processing, and
wherein the memory stores the first color converting table
30 for each kind of the fabric.

Claim 9 (Currently Amended). ~~The~~ A textile printing
apparatus ~~of claim 3,~~ comprising:

inputting means for inputting image data;
a display to indicate an image based on the image data input
5 by the inputting means;
image processing means for applying image processing to the
image data so as to make colors of the image indicated on the
display close to desired colors;

10 a printer to print the image on a fabric based on the image
data applied with the image processing by the image processing
means; and

a memory to store a first color converting table to apply
the first color converting processing and information to apply
the converting processing,

15 wherein the image processing means applies a first color
converting processing to the image data input by the inputting
means in accordance with a kind of fabric and indicates the image
on the display based on the image data applied with the color
converting processing,

20 wherein the image processing means applies a converting
processing to the image data applied with the image processing by
the image processing means in accordance with the kind of fabric,

wherein the image processing means applies the first color
converting processing based on the first color converting table
25 stored in the memory and applies the converting processing based
on the information stored in the memory;

wherein the printer prints the image on the fabric based on
the image data applied with the converting processing, and

wherein the memory stores the second color converting table
for each kind of the fabric.

Claim 10 (Cancelled).

Claim 11 (Cancelled).

Claim 12 (Original). ~~The~~ A textile printing apparatus ~~of~~
~~claim 10,~~ comprising:

inputting means for inputting image data;

a display to indicate an image based on the image data input

5 by the inputting means;

image processing means for applying image processing to the
image data so as to make colors of the image indicated on the
display close to desired colors;

a printer to print the image on a fabric based on the image
10 data applied with the image processing by the image processing
means;

a memory to store a first color converting table to apply
the first color converting processing and information to apply
the converting processing;

15 transmitting means for transmitting color measurement data
obtained by measuring color patch printed on the fabric by the
printer; and

receiving means for receiving the first color converting
table to apply the first color converting processing and the

20 information to apply the converting processing in accordance with
the kind of fabric, wherein the image processing means applies
the first color converting processing based on the first color
converting table received by the receiving means and applies the
converting processing based on the information received by the
25 receiving means,

wherein the image processing means applies a first color
converting processing to the image data input by the inputting
means in accordance with a kind of fabric and indicates the image
on the display based on the image data applied with the color
30 converting processing,

wherein the image processing means applies a converting
processing to the image data applied with the image processing by
the image processing means in accordance with the kind of fabric,

wherein the image processing means applies the first color
35 converting processing based on the first color converting
processing based on the first color converting table stored in
the memory and applies the converting processing based on the
information stored in the memory,

wherein the printer prints the image on the fabric based on
40 the information stored in the memory,

wherein the printer prints the image on the fabric based on
the image data applied with the converting processing, and

wherein at least one of the receiving by the receiving means
and the transmitting by the transmitting means is conducted by
45 using a public communication line.

Claims 13-19 (Cancelled).

Claim 20 (Currently Amended). ~~The~~ A textile printing data
producing apparatus ~~of claim 17,~~ comprising:

receiving means for receiving data obtained by measuring
colors of color patch formed by spraying plural different color
5 inks for fabric to be printed;

determining means for producing ink spraying data
corresponding to a kind of fabric to be printed based on the
received data; and

transmitting means for transmitting the determined ink
10 spraying data;

wherein at least one of the receiving by the receiving means
and the transmitting by the transmitting means is conducted by
using a public communication line.

Claim 21 (Cancelled).

Claim 22 (Cancelled).

Claim 23 (Previously Presented). A textile printing apparatus, comprising:

a receiver which receives image data;

a display which displays an image thereon based on the
5 received image data;

an adjuster which adjusts the received image data to be sent
to the display in order to change a displayed color on the
display;

a converter which converts the adjusted image data into
10 print image data to be used for print, wherein the converter has
a converting table being provided according to a kind of a
textile and having an information with respect to a maximum ink
amount per a unit area of the textile; and

a printer which prints an image on the textile based on the
15 print image data converted by the converter.
